**Re: Source of CV Sciences™ products**

To Whom It May Concern:

This statement has been crafted to identify the source of our hemp extract used to manufacture all CV Sciences™ products.

Using EU-certified hemp seeds from Fiber-type, low THCA hemp varieties, CV Sciences has an exclusive contract with a co-op of farmers in Europe who harvest 3000+ acres of our agricultural hemp. At an on-site European ISO certified facility, we employ chemical-free CO2 extraction to extract the hemp oil from the aerial plant parts of the hemp plants.

All CV Sciences products ensure Full Traceability – From Seed to Shelf™, meaning we are able to manage each step of the supply chain process in order to make the highest quality products available. Through third party analyses, we assure the quality of our oils, testing for potency and for the absence of heavy metals, pesticides, and herbicides.

We appreciate your interest in CV Sciences' supply chain process.

A handwritten signature in blue ink, appearing to read "Jesse Karagianes".
